## Overview

This project is meant to bring out the features of the ICTS staff management system, to serve as a guide to the developers on one hand and a software validation document for the prospective client on the other.

## Abstract

- The entities in this db model are Admin, department heads and department.
- The admin has attributes like Admin\_Id, name and work\_Id.

- The department heads are in charge of their own department issues. When an issue pertaining to a certain department is solved, the department heads fill the 'resolved' attribute. They also keep track of 'cost required'.
- Each department head has work\_id, Dh\_id and name.
- Each member in the department has work\_id, dept\_name, name and dept\_id.
- In case of inter-departmental issues, the concerned department heads contact each other and the admin is notified. The admin is supposed to fill the 'inter\_dept issue' attribute as (Yes/no). The 'cost required' attribute is also filled by the admin.
- The admin has an account of 'no of issues filed', 'no of issues resolved' and 'total cost' required to resolve these issues.
